

PROJECT PROFILE

UNIVERSITY OF IOWA-ALUMNI HALL, IOWA CITY, IOWA

Specifics

Project Details

Location: Iowa City, Iowa

Owner: University of Iowa

Material: Concrete and Steel

This state of the art facility was built on the University of Iowa Campus in honor of the Alumni Association and doubles also as a research center. Ramark was teamed up with Drake Williams who furnished the structural steel with Ramark furnishing the miscellaneous metals consisting of the stairs and rail systems throughout the facility. Coordination was critical and close attention to detail was required when building the stairway system in the massive atrium area. The stair system was suspended between various platform levels following the curvature of the atrium exterior. The stairs were also designed and built using no intermediate support post and had to span from level to level making the system extremely unique.
